

Crystal Lake Street Division Management,

I am writing regarding the notification I received stating that Request W054983-101925 has been marked as "Completed" at 7:40:40 AM on 1/12/2026. While I appreciate the communication, I feel the need to formally contest this status. The requested work has not been performed; in fact, recent City activity has further obstructed the alley.

I would like to bring the following facts to your attention to ensure our records align:

- **Misclassification of Work:** On 1/12/2026 at 7:30 AM, a crew from Kendall Vegetation Services was on-site. However, after speaking with the crew, they confirmed they were hired to trim brush encroaching on the power lines. This does not address the vehicle-level brush and soft-wood trees narrowing the 16-foot alley to 5 feet and the impassable/overgrown nature of the alley along its entire length, which was the core of my request.
- **Active Obstruction:** Since this request was filed, City plow trucks have moved hard-pack gravel into piles at both ends of the alley, creating "gravel walls" that further prevent vehicle access. Far from being "completed," the alley is now less navigable than when my request was opened.
- **Lack of Action on Barricades:** The northern barricades mentioned in the original request remain in place, continuing to obstruct the public right-of-way.

I have maintained a photographic log of the alley's condition throughout the duration of this request. My documentation confirms that no work has been performed to restore the navigable state of the alley or address the specific safety concerns raised regarding the vegetation. The images I share with you today were taken after the request's status was changed to "Completed".

I am operating in good faith as a neighbor and homeowner who values our public infrastructure. I am asking that the City re-open this request and dispatch a supervisor to meet with me at the site where we can verify that the alley remains impassable.

My goal remains the same: the removal of the barricades and the clearing of ground-level overgrowth to restore the 16-foot clearance required for safe vehicle access. Due to the City's plows creating a new issue - gravel walls, the levelling of these new obstructions seem needed too. I do appreciate your request to limit the brush along the powerlines, since I requested ComEd to manage that risk with no response received from their end.

I look forward to a corrected timeline for when these specific tasks will be addressed.

Sincerely,

Jack Billimack

227 Illinois St
